Part II Description of Curriculum Change

A. Catalog Description

BC 401 Laboratory Methods in Biology and Biotechnology 2c-41-3sh

Prerequisites: CH 351 or BC 302

Theory and practice in a number of major analytical and preparative techniques currently in use in physiology, molecular biology, and biotechnology.

B. Proposed Changes

Old title and new title are the same. Old number BI 401; new number BC

C. Justification/Rationale for the Change(s)

Justification for the change is that the Biology Department is not able to offer the course every AY which is a requirement for all junior biochemistry program majors. Therefore, with a BC identification, individuals from either biology or chemistry can teach the course. In fact, last AY the course was taught by a qualified member of the Chemistry Department.

Part III Letters of Support - None

#41 30-JAN-1997 08:50:55.39

NEWMAIL

From: GROVE::KUZNESKI "JODELL KUZNESKI"
To: MMCCARTY
CC:
Subj: docket #4

I just received a call from Bill Dietrich in the BI dept. He is formally withdrawing the proposal for BC 401. The dept has decided to make significant revisions in the course and we can expect to see it again sometime in the future.
