

World Population Growth

World population growth is projected to increase from 7.5 billion in 2010 to 9.6 billion in 2050. This growth is driven by a combination of factors, including a high birth rate in developing countries and a declining death rate due to improved healthcare and living conditions. The United Nations estimates that the world's population will reach 9.6 billion by 2050, with a significant increase in the number of people aged 65 and older.

Mary, as you know, we are in the final year of our implementation of the new Liberal Studies (LS) Curriculum. All LS courses in the Undergraduate Catalog have to be revised by the end of this year to continue to be offered for LS credit in fall 2014. To that end, I have attached a spreadsheet of the Liberal Studies Courses from your department
