Curriculum Proposal C

The proposed curriculum is designed to provide students with a comprehensive understanding of the field. It includes a series of courses that build upon each other, starting with an introductory course and moving through more advanced topics. The curriculum is structured to ensure that students gain both theoretical knowledge and practical skills.

This course is also part of a minor program in Gender, Women's Studies, and Sexuality.

The curriculum is designed to be flexible, allowing students to tailor their studies to their interests and career goals. It includes a variety of elective courses that provide students with the opportunity to explore different aspects of the field. The program also offers students the chance to participate in research and internships, which are essential for developing their professional skills.

The curriculum is approved by the appropriate committee.

(Carol J. Hall)

Course Revision: SAFE 412 Hazard Prevention Management II

Part II. Description of the Curriculum Change

1. Syllabus of Record.

The revised syllabus of record is attached in Appendix A

2. A summary of the proposed revisions:

- a. The course description, objectives and content were updated to better reflect program outcomes and to provide consistency with SAFE 212 Hazard Prevention Management I.

The revised course description changes course prerequisites and focuses on safety management principles and implementation rather than the collection of loss incidents information (see below).

New Course Description

SAFE 412 Hazard Prevention Management II

Prerequisites: SAFE 212

3 lab hours
3 credit hours
(2c-3l-3cr)

Designed to teach a systems-based approach to managing safety programs, hazards, and risk. Emphasis will be placed on understanding proactive approaches to conducting pre-hazard and life-cycle safety analyses of activities / operations and developing safety system documentation (e.g., policies, objectives, goals, performance measures, plans, committee charters, safety procedures, work procedures, audit plans, and accident investigation reports).

d. The course content in the following areas was removed from SAFE 412 and placed in SAFE

212: ~~researching accident trend analysis, accident investigation, accident prevention, accident reconstruction, accident reporting, accident statistics, accident trends, accident types, accident causes, accident consequences, accident costs, accident prevention strategies, accident prevention programs, accident prevention measures, accident prevention techniques, accident prevention methods, accident prevention systems, accident prevention devices, accident prevention equipment, accident prevention materials, accident prevention services, accident prevention products, accident prevention solutions, accident prevention strategies, accident prevention programs, accident prevention measures, accident prevention techniques, accident prevention methods, accident prevention systems, accident prevention devices, accident prevention equipment, accident prevention materials, accident prevention services, accident prevention products, accident prevention solutions~~

effect sequencing and loss incident costs. In addition, the course content was reorganized to better reflect program outcomes and the revised content of SAFE 212. There is some duplication with SAFE 212 in terms of accident causation but this is necessary because of the importance and complexity of this content.

The course evaluation was changed by removing the requirement for coursework. The

D. Components of a Safety Management System – Documentation

(Week 4)

- Policies
- Goals, objectives, targets, mission statements

- Administrative safety procedures
- Work procedures

E. Components of a Safety Management System – Planning

(Weeks 5-8)

- Hazard recognition, evaluation and control

- Workplace design and engineering

F. Components of a Safety Management System – Implementation and Operation

(Weeks 9-11)

- Operational safety and health programs
- Training and orientation
- Behavior-based system approaches

G. Components of a Safety Management System – Evaluation and Corrective Action

(Weeks 11-14)

- Inspections
- Accident investigations

V. Example Grading Scale

The grading scale is as follows:

B	80%-89%
C	70%-79%
D	60%-69%
F	< 60%

VI. Attendance Policy

As student learning is enhanced by regular attendance and participation in class discussions, the instructor expects all students to attend class. The attendance policy for this class follows the Undergraduate Course Attendance Policy which is included in the Undergraduate Catalog.

APPENDIX B: OLD SYLLABUS OF RECORD

I. Catalog Description

SAFE 412 Hazard Prevention Management II

2 class hours

3 lab hours

(2c-31-3cr)

Examine various safety management techniques to identify and prevent the occurrence of hazardous

4. Pareto Charts
5. Scatter Diagrams
6. Force Field Analysis
7. Universal Model
8. Pope's Systems Safety Management

C. Hazardous Condition Prevention (2 hours)

1. Systems Safety Management Loss Incident Sequence Model

2. Using Inspections
3. Measuring the Effectiveness of Programs

D. Cause Analysis of Hazardous Behavior (2 hours)

1. Hazardous Act Analysis Model
2. Causes of Hazardous Behavior
3. Hazardous Behavior Antecedents

E. Safety Behavior Reinforcement (2 hours)

1. Performance Discrepancies

I. Management Performance Evaluation (3 hours)

1. Data to Measure Individual Managers for Accountability Purposes

J. Loss Management Information Systems (3 hours)

1. Categories of Data from Loss Incident Investigations

2. Using Computer Program to Investigate and Analyze
3. Cost-Benefit Analysis

Culminating Activity (2 hours)

Title of Laboratory Exercises	# of Hours	Lecture Units Covered
-------------------------------	------------	-----------------------

Defining a System for Analysis	3	A,B,C
Developing Programs	3	A,B,C
Assessing Programs via Cause and Sequencing Analysis	3	B
Analyzing Hazardous Conditions	3	C
Analyzing Hazardous Behavior	3	D,E,F
Reinforcing Safe Behavior	3	D,E
Devising Training Programs	3	F
Creating Training Devices and Sessions	3	F
Analyzing Decisions via Cost/Benefit	3	G

IV. Evaluation Methods

The faculty member assigned to teach this course could be one of several faculty within the Safety

Sciences Department. What follows is an example of the evaluation methods and weighting used for this course:

E. Examinations	40%
F. Homework	25%
G. Laboratory Reports	25%
H. Course Portfolio	5%
I. Class Participation	5%

Examinations: The examinations will be short answer, multiple choice, true/false and matching with

VIII. Special Resource Requirements

None

Appendix C: Catalog Description

SAFE 412 Hazard Prevention Management II

2 class hours

3 lab hours

Prerequisites: SAFE 212

3 credit hours

(2c-31-3cr)

Designed to teach a systems-based approach to managing safety programs, hazards, and risk. Emphasis will be placed on understanding proactive approaches to conducting pre-hazard and life-cycle safety analysis, identification and evaluation. Other areas addressed include developing safety systems

Appendix D

Introduction

Program Outcomes was run on January 16, 2008. A summary of the assessment
first series of reports addressing program outcomes for the entire department. The
