

1. Chassis Inspection - Check for any damage, loose components, or fluid leaks. Inspect the engine, transmission, and suspension.

2. Oil Change - Check the oil level and change it if necessary. Use the recommended oil grade.

3. Brake Inspection - Check the brake pads, shoes, and discs. Adjust or replace as needed.

4. Fluid Levels - Check the levels of the coolant, power steering fluid, and windshield washer fluid.

5. Tire Inspection - Check the tire pressure and tread. Rotate the tires if necessary.

6. Light Inspection - Check the headlights, taillights, and turn signals. Replace any burnt-out bulbs.

7. Wash and Wax - Wash the car thoroughly and apply a coat of wax to protect the paint.

8. Final Check - Take the car for a short test drive to ensure everything is working properly.

9. Record Keeping - Keep a log of all maintenance work done on the car.

10. Storage - If the car will be stored for a long period, take extra precautions to protect it from rust and theft.

11. Conclusion - Regular maintenance is key to keeping your car in good condition and extending its life.

12. FAQs - **Q: How often should I change my oil?** A: Typically every 5,000 to 7,500 miles, depending on the oil grade and driving conditions.

13. **Q: What are the signs of a bad alternator?** A: Dimming headlights, a dead battery, and a whining noise from the engine.

14. **Q: How do I check my tire pressure?** A: Use a tire pressure gauge on each tire, including the spare. Refer to the owner's manual for the correct pressure.

15. **Q: Why is it important to rotate my tires?** A: Tire rotation helps to wear the tires evenly, extending their life and improving handling.

16. **Q: How do I know if my car needs a tune-up?** A: Symptoms include rough idling, poor fuel economy, and a check engine light.

17. **Q: What should I do if I notice a fluid leak?** A: Stop driving immediately and have the car inspected by a professional.

18. **Q: How do I choose the right car insurance?** A: Consider your budget, driving record, and the needs of your vehicle.

Course Deletion: SAFE 402 Health Hazard Evaluation

Part II - Description of the Curriculum

1. SAFE 402 Health Hazard Evaluation is being deleted from the Safety Sciences B.S. Curriculum

2. Identification Section 1 - N/A - 2005 - Identification Section 1 - N/A - 2005
